

How Many Students are at Wellesley?

This question sounds simple, yet the answer is not always straightforward. There are several ways of thinking about how many students we have – from the perspective of who is enrolled in courses right now or from the perspective of who is making progress toward a degree. Over what time period are we measuring – fall semester, spring, the whole year? The people seeking this information have different ideas in mind when they ask “How many students are at Wellesley?”

The document that follows seeks to provide answers to five different versions of that question by providing five alternative measures of how many students are at the College. Each measure is named and defined in the following matrix, which details the kinds of students who are included in each measure, and the current value of each measure is reported. Most users are interested in the number of *matriculants*, which is the number of students pursuing a degree at the College, and is the number used in our admissions and other materials when we want to describe the “size” of Wellesley, but other users will find the other definitions more useful.

This resource is maintained by the Office of Institutional Research. The data are updated once per semester, after the student census takes place. Please treat these as the official enrollment measurements endorsed by the College.
